IDAHO FALLS
POWER

A Small Credit That Adds Up

Have you noticed a credit on your electric bill? That's thanks to the Power Cost Adjustment, or PCA, which is currently helping lower electricity costs for Idaho Falls Power customers.

The PCA is a yearly adjustment that reflects how much it costs to supply electricity. Some years power costs more to produce or purchase, and other years it costs less, often depending on things like water levels for hydropower and prices in the regional energy market. When those costs come in lower than expected, the savings are passed on to customers through the PCA. The current PCA provides a 0.50¢ per kilowatt-hour credit on all customer bills. For residential customers, that lowers the effective energy rate from 7.60¢ to 7.10¢ per kWh. Because Idaho Falls Power is a community-owned utility, those savings go back to the people we serve. The PCA may change depending on future costs; but for now, it's helping keep electric bills a little lower.

Seal in Comfort with Energy-Efficient Windows

Thinking about replacing your windows? Idaho Falls Power offers generous rebates and zero-interest loans for qualifying customers to help make window upgrades more affordable. New, energy-efficient windows help keep your home warmer in the winter, cooler in the summer, and reduce energy use year-round.

Customers can schedule a free energy consultation with our Energy Efficiency Specialist who will provide recommendations for efficiency improvement and provide estimates on rebate amounts. Rebates for window replacements range from \$12 to \$16 per square foot depending on the type of window being replaced.

This program is available to residential customers with permanent electric heat, including owner-occupied homes and rental units with the owner's permission. Customers who qualify may also choose a zero-interest loan instead of a rebate, making it even easier to invest in long-term comfort and savings. To schedule your free energy consultation, contact us at 208-612-8430.

Investing in Reliability

Idaho Falls Power continues to make important investments in our electric system to keep service safe, reliable, and ready for the future. Crews are working on a number of capital improvement projects, including replacing aging power poles, upgrading overhead wires and infrastructure, and relocating select overhead lines underground. These improvements are part of a long-term effort to modernize our electric grid and strengthen the infrastructure that delivers power to homes and businesses every day.

Another major project currently underway is the rebuild of the turbine runner at the City's hydroelectric plant. The facility has been temporarily taken offline and dewatered so crews can complete the work, which will take several months. Projects like these are essential to maintaining dependable service and ensuring Idaho Falls Power continues delivering affordable, reliable energy for years to come.

April is Safe Digging Month

Spring projects are right around the corner... gardening, installing fences, planting trees, and more. Before you dig, remember to call 811 to have underground utilities marked. In Idaho Falls, many essential services run underground including electric, water, sewer, gas, telecommunications, and fiber lines. Even small projects can damage these lines, potentially causing injuries, service disruptions, and costly repairs.

**SAFETY IS IN YOUR HANDS.
EVERY DIG. EVERY TIME.**

Call 811 or visit call811.com at least two business days before you dig. The service is free and helps protect you, your property, and the community's critical infrastructure.
